

Synopsis Excel Export Additional Information

When you export from the developer tab in Excel name the file resources.xml. When the file is created open it and delete the `xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"` from the first `<synopsis_Map>` before dragging the resources.xml on to the Rip-Synopsis-information-from-.xml-.ini.bat batch file. If you don't the script will fail.

```
1 <?xml version="1.0" encoding="UTF-8" standalone="yes"?>
2 <synopsis_Map xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
3   <synopsis>
4     <foldername>Avalaunch</foldername>
5     <title>Avalaunch</title>
```

The first few lines of the resources.xml should look like this after removing this line that is generated by the Excel xml export.

```
1 <?xml version="1.0" encoding="UTF-8" standalone="yes"?>
2 <synopsis_Map>
3   <synopsis>
4     <foldername>Avalaunch</foldername>
5     <title>Avalaunch</title>
```
